SUMMARY

The `<table>` element is used to add tables to a web page.

SUMMARY

A table is drawn out row by row. Each row is created with the `<tr>` element.

SUMMARY

Inside each row are cells represented by the `<td>` element (or `<th>` if it is a header).

SUMMARY

You can make cells of a table span more than one row or column using the `rowspan` and `colspan` attributes.

SUMMARY

For long tables you can split the table into a `<thead>`, `<tbody>`, and `<tfoot>`.
